

**We are required by
the United States Department of Transportation
Pipeline Safety to make the following**

Notification to Our

NATURAL GAS CUSTOMERS

As a natural gas customer of JPC Energy, LLC, you may request an Excess Flow Valve (EFV) to be installed in your gas service line between the main line and the service riser. This EFV is a safety device used to shut off the flow of natural gas automatically if the service line is cut or broken. This safety device is designed to eliminate blowing gas and possible injury to the customer and the general public however, it is not mandatory.

The EFV is installed in the gas service line as close to the main gas line as possible and the customer will be charged a fee of \$1,500.00 for installing, maintaining and/or replacing the EFV.

Should you, as a natural gas customer, request the installation of an EFV, the load or consumption of your residence or building cannot exceed 1,000 Standard Cubic Feet of Gas per Hour (SCFH) and the operator must install the EFV at a mutually agreeable date.
